

Oil Problem?

900 GLOBAL Solution - Break S75

The Break S75 adds an additional weapon to the Break arsenal. The Break S75 shell is more aggressive, featuring a new absorbent coverstock technology designed to move oil rapidly away from the surface, enhancing an already high friction coverstock.

The Break series asymmetric core was designed to create length and flip. This, combined with the more aggressive S75 shell, provides a ball path motion that reads the mid-lane earlier than the first two Breaks and provides a strong move at the breakpoint.

900 Global uses a numeric rating system to rate the aggressiveness of its coverstocks. (S10 least aggressive - S90 most aggressive)

Break S75 – the scoring continues...
