Countless hours of Research & Development for the Dark Matter yielded a brand new coverstock for the 900 Global brand... the S60 Solid. The use of friction enhancing additives in our S43 shell mutated it into the S60, creating additional chemical bonding sites in its urethane formulation. What does this do? – increased response in the back part of the lane! Combined with the Dome Symmetric core, the Dark Matter will provide a new shape in the 900 Global line in between our Preferred and Select Series.

## CHEMICAL X™

**Coverstock:** S55™ Solid  
**Color:** Slate/Lemon-Lime  
**Finish:** 4000 Grit  
**Core:** Pod™ Symmetric  
**Flare Potential:** 3-4"  
**SKU#:** GCX

The Chemical X marked an exciting release in our new Tour Preferred Series, which features tournament oriented bowling balls with a lot of influence from 18-Time PBA Champion Chris Barnes. The low RG / low flaring symmetric Pod Core and S55 Solid coverstock combine to create the ball motion competitive bowlers need on tougher and flatter conditions.
